WellMed Partners With MedTouch Internet Health Service; Health Profiling
    software helps individuals manage personal health risks
BUSINESS WIRE
June 22, 1998   15:6
JOURNAL CODE: WBWE   LANGUAGE: English   RECORD TYPE: FULLTEXT
WORD COUNT: 582

        PORTLAND, Ore.--(BW HealthWire)--June 22, 1998--WellMed, a pioneer in
the creation of electronic health risk profiling and management tools, and
the National Emergency Health Data Center, a leader in the electronic
storage of personal health records, today announced a partnership to
enhance the health consumer Internet experience by integrating two of their
products, Health Quotient(TM) (HQ) and MedTouch.
        The combined offering will allow users to electronically store and
maintain   medical   information   with   absolute security, privacy and
confidentiality. They can then retrieve this information anytime, anywhere
the need arises, either via the Internet, fax back or telephone technology.
Through the HQ component, individuals can identify their key health risks
and receive customized, topic-specific information via a personalized home
page on the Internet.
        "Our relationship with WellMed creates a dynamic personal health
information manager," said Michael Rozen, MD, founder and CEO of National
Health Emergency Data Center. "We are blending technology with human need
to help people store and have access to their personal health records in a
safe, secure, confidential environment. Additionally, with the HQ health
risk profiling tool, users can better manage their health using the
personalized information we deliver."
        "This partnership creates a powerful new health management tool," said
Craig Froude, president of WellMed. "HQ adds another level of control and
information to the delivery of accurate personal health information,
anywhere and anytime. Both WellMed and National Emergency Health Data
Center empower consumers to take a more active role in managing their own
health."
        HQ   administers   a carefully scripted questionnaire covering an
individual's family history, personal health status and lifestyle. Unique
among health profiling tools, HQ focuses on a risk factor's degree of
abnormality, and the interaction between risk factors that may increase the
likelihood of a chronic disease. HQ uses advanced algorithms in conjunction
with a continually updated library of peer-reviewed medical data to develop
detailed personal risk profiles. HQ's unique "Universal Health Index"
allows   individuals   to   compare   their   results with national health
benchmarks. After identifying personal health risks, HQ will filter
electronic health resources and content to provide users with access to
information based on their individual health status.
        MedTouch   provides   confidential   storage   of   pertinent   health
information. It functions seamlessly using Internet, fax and telephone
technology for data entry and record access. Personal health records are
stored in three separate levels to allow the individual full control over
who has access to what parts of their information. The levels include an
Emergency Health Data Record for routine needs; a Confidential Health
Record for more sensitive personal information; and related health
documents such as living wills and test results. An Infant Health Record

will be available this fall.

MedTouch is individually available for a $34.95 per person annually and can be obtained at www.medtouch.net or by calling 888/222-4006.

About WellMed

WellMed Inc. provides health risk assessment services, software and consulting. Its customers include corporations, managed care organizations, Internet-based health information providers, pharmaceutical companies, and health care provider networks. WellMed is located in Portland, Oregon. For more information about WellMed, visit www.wellmed.com.

About the National Emergency Health Data Center

The National Emergency Health Data Center, based in Cincinnati, Ohio, works with health care stakeholders including insurers and health information networks as well as corporations and individuals. The Center offers programs that empower consumers to control their personal health records and better manage those records. Further information is available at www.nehdc.com.
